Call Forward Cisco from the Phone and Computer

The cdpCachePlatform attribute provides a detailed description of the connected endpoint - in this example, a Cisco IP Phone 7911. The dashed lines indicate sections where the output has been truncated for display purposes: Step 5 To verify the expected attribute data, you can use the following commands from the access switch console:

ISE Profiling Design Guide - Cisco Community

The Cisco IP phone and the switch start exchanging CDP messages. The first CDP frame received from the Cisco IP phone allows the switch to realize that a Cisco IP phone is actually connected to the port so that the right information, such as power level, voice VLAN ID (VVID), and so on) can then be delivered to the phone.
