7 Received Signal Strength: Radio Astronomy • The jansky (Jy): $> 1 \text{ Jy} \equiv 10^{-26} \text{ W/m}^2/\text{Hz}$ • The jansky is a measure of spectral power flux density—the amount of RF energy per unit time per unit area per unit bandwidth • The jansky is not used outside of radio astronomy > It is not a practical unit for measuring communications signals

Penn State College of Engineering. Take that same spring and tie it to a rope. If you were to flick the spring to the left-of-center, the disturbance would travel the length of the spring until it hit the rope, at which point it would reverse direction and start travelling back towards you on the same side, left-of-center.

This module is an introduction to the RF systems of particle accelerators. RF stand for radio frequency and indicates that the systems deal with electromagnetic waves with frequencies that are common for radio systems. The RF system generates electromagnetic waves and guides them down to cavities.
